

Python for Bioinformatics

Reading & Writing Files

UNIVERSITY OF
LIVERPOOL

The University
Of Sheffield.

Map

Reading / Writing Files:

Data streams

Write FASTQ data

Calendar

Morning 1: Foundations of Python

Afternoon 1: Data Structures, Conditions, & Loops

Morning 2: Reading & Manipulating DNA Data

Afternoon 2: **Reading and Writing Files**

Reading and Writing Files

Reading and Writing Files

Opening files

`open (file, "mode")`

“Open” establishes a link to the file

read file using 'with' and 'open'

with `open("/path/to/file", 'r')` as input_file:

Three options:

r = 'read'

w = 'write'

a = 'append'

Opening files

`open (file, "mode")`

“Open” establishes a link to the file

read file using 'with' and 'open'

```
with open("/path/to/file", 'r') as input_file:
```

Three options:

r = 'read'

w = 'write'

a = 'append'

Opening files

a)

with open()

b)

as variable

read file using 'with' and 'open'

```
with open("/path/to/file", 'r') as input_file:
```

Opening files

a)

with open()

b)

as variable

```
# read file using 'with' and 'open'
```

```
with open("/path/to/file", 'r') as input_file:
```

```
# loop through the file
```

```
for row in input_file:
```

```
# do something
```

```
print(row)
```

Reading and Writing Files

Writing files

Use the
.write()
method

write file using 'with' and 'open'

with open("/path/to/file", 'w') as output_file:

Writing files

Use the
.write()
method

write file using 'with' and 'open'

with open("/path/to/file", 'w') as output_file:

Writing files

Use the
.write()
method

write file using 'with' and 'open'

with open("/path/to/file", 'w') as output_file:

output_file.write("text_to_write")

output_file.write("CGTGATGAG")

Writing DNA Data to File

Writing DNA Sequence files

Use the
`SeqIO.write()`
method

```
seqIO.write(list_of_sequence_records,  
            output_filename,  
            format)
```

Format options: “fastq”, “fasta”

Writing DNA Sequence files

Use the
`SeqIO.write()`
method

```
seqIO.write(list_of_sequence_records,  
            output_filename,  
            format)
```

```
seqIO.write(sequence_records,  
            "output.fastq", "fastq")
```

Recap

with & open

read, write, append

SeqIO.write()
